

**ABSTRACT OF THE DISCLOSURE**

The present invention provides a multi-piece solid golf ball, which is superior in rebound characteristics, flight performance and durability, while maintaining good productivity. The present invention relates to a multi-piece solid golf ball comprising a core, an intermediate layer formed on the core and a cover covering the intermediate layer, wherein

the intermediate layer is formed from an intermediate layer composition comprising a functional group modified resin as a main component,

the cover is formed from a cover composition comprising a resin having polar site that can react with the functional group of the functional group modified resin in the intermediate layer as a main component, and

a hardness of the intermediate layer is lower than that of the cover.
